Market Fundamentals Update

June 2020
Disclaimer and forward-looking statements

This presentation contains certain statements that are, or may be deemed to be, “forward-looking statements” within the meaning of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended. All statements other than statements of historical fact contained in this presentation, including statements regarding the future results of operations and financial position of NextDecade Corporation and its subsidiaries (collectively, the “Company” or “NextDecade”), its strategy and plans, and its expectations for future operations, are forward-looking statements. The words “anticipate,” “contemplate,” “estimate,” “expect,” “forecast,” “intend,” “believe,” “may,” “might,” “will,” “would,” “could,” “should,” “can have,” “likely,” “continue,” “design” and other words and terms of similar expressions, are intended to identify forward-looking statements.

The Company has based these forward-looking statements largely on its current expectations and projections about future events and trends that it believes may affect its financial condition, results of operations, strategy, short-term and long-term business operations and objectives and financial needs. Although the Company believes that the expectations reflected in its forward-looking statements are reasonable, actual results could differ from those expressed in its forward-looking statements. The Company’s future financial position and results of operations as well as any forward-looking statements are subject to change and inherent risks and uncertainties. You should consider the Company’s forward-looking statements in light of a number of factors that may cause actual results to vary from its forward-looking statements including, but not limited to: the Company’s progress in the development of the Company’s liquefied natural gas (“LNG”) liquefaction and export projects and the timing of that progress; the Company’s final investment decision (“FID”) in the construction and operation of a LNG terminal at the Port of Brownsville in southern Texas (the “Terminal”) and the timing of that decision; the successful completion of the Terminal by third-party contractors and an approximately 137-mile pipeline to supply gas to the Terminal being developed by a third-party (the “Pipeline”); the Company’s ability to secure additional debt and equity financing in the future to complete the Terminal; the accuracy of estimated costs for the Terminal; statements that the Terminal, when completed, will have certain characteristics, including amounts of liquefaction capacities; the development risks, operational hazards, regulatory approvals applicable to the Terminal’s and the third-party pipeline’s operations and activities; the Company’s anticipated competitive advantage and technological innovation which may render the Company’s anticipated competitive advantage obsolete; the global demand for and price of natural gas (versus the price of imported LNG); the availability of LNG vessels worldwide; changes in legislation and regulations relating to the LNG industry, including environmental laws and regulations that impose significant compliance costs and liabilities; the 2019 novel coronavirus (“COVID-19”) pandemic and its impact on the Company’s business and operating results, including any disruptions in the Company’s operations or development of the Terminal and the health and safety of the Company’s employees, and on the Company’s customers, the global economy and the demand for LNG; risks related to doing business in and having counterparties in foreign countries; the Company’s ability to maintain the listing of its securities on a securities exchange or quotation medium; changes adversely affecting the business in which the Company is engaged; management of growth; general economic conditions; the Company’s ability to generate cash; compliance with environmental laws and regulations; and the result of future financing efforts and applications for customary tax incentives.

Additional factors that you should consider are set forth in detail in the “Risk Factors” section of the Company’s most recent Annual Report on Form 10-K as well as other filings the Company has made and will make with the Securities and Exchange Commission which, after their filing, can be found on the Company’s website, www.nextdecade.com.

Should one or more of the foregoing risks or uncertainties materialize in a way that negatively impacts the Company, or should its underlying assumptions prove incorrect, its actual results may vary materially from those anticipated in its forward-looking statements and, its business, financial condition and results of operations could be materially and adversely affected. You should not rely upon forward-looking statements as predictions of future events. In addition, neither the Company nor any other person assumes responsibility for the accuracy and completeness of any of these forward-looking statements. The Company cautions readers that the information contained in this presentation is only current as of the date of this presentation and, therefore, except as required by applicable law, the Company does not undertake any obligation to publicly correct or update any forward-looking statement.
NextDecade Corporation (NASDAQ: NEXT) is a liquefied natural gas (LNG) development company focused on LNG export projects in the State of Texas. We are developing the largest LNG export solution linking Permian Basin and Eagle Ford Shale natural gas to the global LNG market, creating value for producers, customers, and our shareholders. Our portfolio of projects includes the Rio Grande LNG export facility, a 27 million metric tonnes per annum (mtpa) project situated on a 984-acre site in the Port of Brownsville in South Texas. NextDecade is headquartered in Houston.
Long-term fundamentals of Rio Grande LNG remain firmly intact

Global LNG market will tighten, more FIDs needed to offset supply shortfall

COVID-19 pandemic has created challenges for LNG projects that have already achieved FID

With projects being pushed “out and to the right,” global LNG demand is expected to exceed supply beginning in 2022

Permian Basin has an enormous economic associated gas resource

The Permian Basin has proven resilient through prior downturns, and is poised to recover rapidly

The Permian Basin is home to the largest concentration of investment grade producers in the United States

Texas natural gas production still expected to grow by up to 10 Bcf/d

Shut-ins and reduced 2020 capital expenditures result in Texas gas production growth being postponed – not eliminated

In any COVID-19 recovery scenario, Texas producers need incremental LNG export capacity to support natural gas production growth

NextDecade’s Rio Grande LNG project is needed now more than ever
Global LNG Market
Reduction in new LNG supply further tightens market

Supply shortfall is increasingly likely now that projects – including some that have already achieved FID – are being “pushed to the right” due to near-term COVID-19 disruption

- Global LNG demand is expected to exceed supply beginning in 2022, and incremental LNG capacity takes time to build
- In each year since 2014, an average of 25 mtpa of incremental liquefaction capacity was added to the global LNG market
- Without additional FIDs, just 52 mtpa of incremental liquefaction capacity will be added by 2025\(^1\)
- Potential schedule and budget challenges, including for projects that have achieved FID, may further reduce available supply

Consistent new production coming online, on pace with rising demand, leading to stable prices with eventual downward pressure on 2019-2020 prices

Period in which demand is expected to exceed supply starting in 2022, requiring additional projects to FID in the near term

Source: Wood Mackenzie | \(^1\) Projects that are operating, starting up, under construction, or achieved FID
Global LNG market needs more FIDs

Global LNG trade increased by 12 percent (39 mtpa) YoY to 354 mtpa in 2019

- From 2000 to 2019, the LNG market has grown by an annual average of 6.7 percent
- Nearly 70 mtpa of LNG capacity FIDs in 2019, 21 mtpa of LNG capacity FIDs in 2018
- Available supply is expected to be 433 mtpa in 2025 compared to projected demand of 517 mtpa
- At least 84 mtpa of additional capacity needs to achieve FID to supply the expected global LNG shortfall by 2025

### Recent FIDs

Texas Oil & Gas Market
Permian Basin: superior resource and economics

The Permian Basin offers one of the deepest inventories of economic natural gas resource in the world

- 700 Tcf of remaining natural gas resource in the Permian Basin and Eagle Ford Shale combined
- Permian Basin economics are driven by the production of oil, not gas
- Due to flaring restrictions, producers must market their natural gas in order to sustain oil production programs
- 90 percent of remaining Permian Basin natural gas resource can be produced at break-evens below $0/MMBtu
- The Permian Basin will produce significant quantities of low-cost natural gas for decades

Source: Enverus ‘Remaining Resources and HH break-evens of select North American basins,’ PV-10 at $60 per barrel of West Texas Intermediate
Texas supply basins are resilient, fundamentals remain intact

The COVID-19 outbreak has resulted in market weakness around the world, but the Permian Basin – and associated investment opportunities – are poised to recover rapidly when unprecedented circumstances subside

Key Points

- The Permian Basin and other Texas supply basins have proven resilient through prior downturns
- The Permian Basin offers one of the deepest inventories of economic natural gas resource in the world, with stacked pay potential and compelling single-well economics
- Shut-ins and reduced 2020 capital expenditure following onset of global COVID-19 pandemic result in production growth being postponed – not eliminated
- Even a modest crude oil price recovery allows for continued oil and gas development and growth in Texas
- Overall activity levels are expected to recover; in some rig count recovery scenarios, production could recover rapidly
- Despite short-term market disruption, Texas natural gas production is expected to grow by up to 10 Bcf/d by 2030
- Development of NextDecade’s Rio Grande LNG project remains critically important to the future of Texas gas markets

In any COVID-19 recovery scenario, Texas producers need incremental LNG export capacity to support natural gas production growth
Focus on long-term production trends

- Most analyst, consultant, and media reports focus on reduced production in the immediate term.
- As base declines flatten, even small amounts of new drilling activity can rebuild basin production quickly.
- Gas production is more resistant to decline than oil production even with a significant drop in drilling activity.
- Gas production from new wells also maintains higher production levels compared to IP-30 rates, which is consistent with rising gas-to-oil ratios commonly reported in oil-driven basins.

Source: Representative base production provided by Enverus
Permian Basin: continuous improvement through efficiencies

Permian production has proven resilient through prior downturns and as producers have increased drilling efficiencies

Sources: BakerHughes and EIA | 1 Permian production includes oil and dry gas production at 6:1 boe conversion
Oil-directed drilling remains major focus of IG producers

Permian Basin and Eagle Ford Shale home to highest number of rigs among investment grade producers

- 77 percent of rigs operated by investment grade producers are in the Permian Basin and Eagle Ford Shale
- 54 percent of all rigs in the lower 48 United States are in the Permian Basin and Eagle Ford Shale
- Oil-directed drilling in the Permian Basin remains the dominant activity among U.S. producers

Sources: Baker Hughes and Citi as of May 29, 2020
Historical Permian Basin rig counts and Brent pricing

- From 2014 to 2019, a clear pattern exists between Brent pricing and Permian Basin rig counts
- In the 2016/2017 recovery, Permian doubled average rig counts in fewer than 12 months as Brent rose from $35/bbl to $55/bbl
- Brent currently trading above $40/bbl in 2021 with the curve in contango

Sources: BakerHughes and Platts
Permian rig count recovery

- The 2016/2017 recovery took 18 months from trough-to-peak rig counts (134 to 400)
- Neither NEXT Base Case nor NEXT High Case requires a return to 2018/2019 high rig counts to generate production growth
- NEXT Base Case and NEXT High Case imply gradual returns to 350 rigs and 430 rigs, respectively, and no sooner than 2025
- Unlike the 2016/2017 recovery, Permian oil and gas production does not face midstream capacity constraints

Source: BakerHughes
Incremental gas supply in Texas

Driven by continued growth in the Permian Basin, natural gas production in the State of Texas is expected to reach 33-36 Bcf/d by 2030.

Assumptions:

- NEXT Base Case: 350 rigs in the Permian Basin by 2025
- NEXT High Case: 430 rigs in the Permian Basin by 2025
- Texas gas production is comprised of dry gas produced in the Permian, Eagle Ford, Haynesville, and Barnett, net of interstate pipeline flows
- Production growth assumed to occur only in the Permian Basin
- Gas production in other Texas supply basins assumed to be consistent with 2019 levels to 2030
- No drilling efficiency improvements from 2019

Sources: NextDecade estimates using data from U.S. Energy Information Administration (EIA), Enverus, BakerHughes, Barclays, and various public records.
Despite disruption caused by COVID-19, Texas natural gas production is expected to continue growing.

- Growth in Texas and Mexico gas demand to support incremental natural gas production remains limited.
- Texas needs incremental LNG export capacity to support projected natural gas production growth by 2030.
- LNG projects can provide flow assurance for associated gas from oil production.

Dry gas production in Permian, Eagle Ford, Haynesville, and Barnett. NextDecade basin estimates using data from U.S. Energy Information Administration (EIA), Enverus, BakerHughes, Barclays, and various public records. Growth is assumed only in the Permian Basin. Production in other basins assumed to be consistent with 2019 levels out to 2030. Texas natural gas consumption (EIA) includes residential, commercial, industrial, electric, vehicle, and plant and pipeline fuel. Calculations are net of interstate pipeline flows.

Assumes 2 percent annual growth in Texas demand.

Includes five LNG trains already operating in Texas as of June 2020: Corpus Christi Trains 1-2 and Freeport Trains 1-3.

Assumes incremental 2 Bcf/d of pipeline exports to Mexico.

Corpus Christi Train 3.
Waha discount persists in spite of short-term disruption

Longer term market implies significant increases in associated gas production in Texas with insufficient demand to absorb large volumes

Forward curve resembles pre-COVID-19 levels despite:
- Reduced 2020 capex budgets across all producers
- Lower Permian Basin rig counts (May 29: 148 rigs compared to year-ago level of 452 rigs)
- Another 4+ Bcf/d of takeaway capacity under construction (Permian Highway and Whistler)

Source: Platts Historical Waha Spot and Waha Front Month Forward curves
Henry Hub expected to remain in-line with pre-COVID 19 levels

Market anticipates continuation of significant gas production coupled with insufficient domestic demand

Henry Hub Spot Price

Conclusion
Fundamentals remain firmly intact

Development of NextDecade’s Rio Grande LNG project remains critically important to the future of global LNG and Texas oil & gas markets

- Global LNG market will tighten, more FIDs needed to offset supply shortfall
- Permian Basin has an enormous economic associated gas resource
- Texas natural gas production still expected to grow by up to 10 Bcf/d
- In any COVID-19 recovery scenario, Texas producers need incremental LNG export capacity to support natural gas production growth

“Our balance sheet is strong, we have no debt outstanding, and the long-term fundamentals for our Rio Grande LNG project remain firmly intact. This solid foundation, together with our sustained regulatory, engineering, and commercial progress, positions NextDecade extremely well for when global market conditions improve.”

-- Matt Schatzman, NextDecade Chairman and Chief Executive Officer, May 18, 2020
